in idle freight cars. The market effect of these losses was, however, medified by expectations that the railroads would be victorious.

Continue Hopeful.

There was a similar modifying effect for the poor statistical showing in current returns from iron and steel and from copper. Hopeful sentiment is recorded in these trades.

Expansion in merchandise imports for December directed attention to tariff law influences. The expected January relax, ation of money markets proved marked. Beflux of funds to New York was strong, with gold from Canada included. Demand for bonds improved, but foreign exchange rates rose. Corporations are said to be negotiating further postponement of long-term issues. The problem of funding government note issues weighs on the market for capital in Paris, with the delayed French loan an obstacle. Mexican and Brazilian difficulties disturb both Paris and London.

The stock market made a poor start today on account of a sharn break in the company was to be taken over by Schaffer vesterday's advance. New York Central made a new low price for its present inovement, dropping to 894, within a fraction of its low mark for temperature of the company was to be taken over by Schaffer vesterday's advance. Additional Mining News

MINERAL MAGNESITE OPOHONGO SEEKING IS OVER HALF GAS ORE ON 300 LEVEL

ide, Gas Used in Charging Soda Water.

Magnesite is a mineral which is over Nevada, Arizona, and western Texas. Eureka Reporter. A number of these deposits, especially which is superior in purity to much of pected almost any time.

which is superior in purity to much of that mined abroad.

Bulletin 355 of the United States geological survey, entitled "Magnesite Deposits of California," by Frank L. Hess, was based on field examinations of the California deposits made in 1995 and during the winter of 1906-7. This bulletin is still available, but since its publication new deposits have been opened, consumption has increased, and inquiries constantly being received at the survey for information relating to the occurrence and utilization of this material have led to the publication of bulletin 540-S, entitled "Late Developments of Magnesite in California and Nevada," by Hoyt S. Gale.

Conditions governing the production and consumption of domestic magnesite have not changed in any marked degree

rates to allow them to place their prod-uct on the eastern market.

Bulletin 355 of the United States geo-logical survey by Hess and bulletin 540-S by Gale are believed to describe all the commercial important magnesite deposits in the west. Copies of these reports may be obtained free on appli-cation to the director of the survey at Washington, D. C.

ling.

Loon creek has some very promising placer ground. It has been found that this district contains veins which have been prospected to considerable depth, with a good grade of gold and copper ore showing. Some of these properties with a good grade of gold and core showing. Some of these prop have been taken up by large conles, who are waiting for the rabulders, yet there is plenty of ground to be located.

RICO-WELLINGTON IS IN EXCELLENT SHAPE

Special to The Tribune
PROVO, Jan. 10.—At the meeting of
directors of the Rico-Weilington, 1-id
here today, the mine was reported in excellent condition and the outlook most

cencouraging.

The mine is now shipping a car of ore a day to the Garfield smelter. In December thirty-four cars were shipped.

This ore nets \$10 a ton.

The present indebtedness of the com-The present indebtedness of the com-pany is approximately \$49.871. It is im-possible to state the amount exactly be-cause of ore in transit. At the be-ginning of the year covered by the re-port the indebtedness was \$111,556. The report says the ore resources are in-creasing in quantity and improving in values.

material have led to the publication of bulletin 540-S, entitled "Late Developments of Magnesite in California and Nevada," by Hoyt S. Gale.

Conditions governing the production and consumption of domestic magnesite have not changed in any marked degree in recent years. The presence of many good deposits of this material in California must continue to furnish the impetus which will tend to put our own product on the market as soon as natural conditions will allow. At present by far the largest part of the magnesite used in the United States is imported and is consumed in the eastern states, the importations being about twenty times the domestic production and ranging from 100,000 to 150,000 tons a year.

Considerable interest in the domestic production of magnesite has been aroused of late in anticipation of the possible advantage that may accrue with the opening of the Panama canal, in the hope that this new route may enable California producers to reach the castern ports at sufficiently low freight rates to allow them to place their product on the eastern market.

Bulletin 355 of the United States goological survey by Hess and bulletin 540-S by Gale are believed to describe all the commercial important magnesite deposits in the west. Coples of these reports may be obtained free on application to the director of the survey at Washington, D. C.

Gold Chain Shipping.

GOOD PROSPECTING
FIELD IN IDAHO

William Ropp, an old-time prospector, who occasionally drifts into the city, is here from Idaho. In northwestern Custer county in that state, he says, he found some fine mineral-bearing ground in the Bay Horse. Loon Creek and Yankee Fork districts. In these camps there are a few properties that have been developed to an extent that shows large deposits of pay ore in commercial quantities. The principal reason for these mines not shipping is the distance from rallroads.

In these districts he says that he found considerable silver, lead, copper and gold and most of the product shows averages of from \$50 to \$100 a ton. There is the usual amount of higher grade, running several hundred dollars to the ton, and a large amount that would easily average \$20 to the ton. In places there is very little ore outcropping, but the surface indications are such as to assure prospectors a fair return on development work, and the conditions are ideal for prospecting.

Loon creek has some very promising

Gold Chain Shipping.

The drift which was driven over into the Gold Chain ground from the 1500 level of the Lower Mammoth is still eacting through some low grade ore and while occasional bunches of the higher grade products are found from time to time, the shipping ore is yet to be located. Assistant Manager Loose says that very good headway is being made with the development work which is being handled from the Lower Mammoth side, considering the fact that but one shift is in use. He intends to continue the work on both the 1500 and 1800 levels until the ground is thoroughly prospected.

IS TAINTED

More than two-thirds of the people of the world are afflicted with tainted blood, according to medical statistics. Some have acquired it through disease, but most have inherited it. This is an alarming state of affairs. Did it ever occur to you that you may be among that great majority who have impure blood? You MAY TREAT FOREVER with medicines directed to the relief of your symptoms, but unless your blood is first made pure the medicines will all fail. Tou have intelligence enough to agree with me in this, REMEMBER THIS: Nothing can be cured unless the blood stream which carries all nutrition to the organs is pure.

I put the blood in perfect condition and nature does the rest.

THE NEW SCIENTIFIC METHOD.

I have a Salvarsen Equipment from which 250 to 300 cubic centimeters (little less than a quart) is poured directly into the heart; from there it is sent through every artery and vein. I will demonstrate to you how you may be cured if you have an affliction that will not yield to ordinary treatment.

I keep up with the latest scientific methods and apply them in my work; you can get the best for the same price you will hav for cheap work Careful attention to study and work in the new control of leading specialist in men's diseases. A call costs nothing, proves everything. In a word, I cure private disorders of every form. If you desire a nive come to me.

Withe for information, if unable terms and the control of the same price you will not be a control of the costs of the c

copper, the other values being in silver, gold and lead. While most of the work at the May TO PRESERVE ASSE

While most of the work at the May Day mine is in the bands of lessees, an important piece of prospecting is now being done about seventy feet above the 700 level. Within the past week or ten days the drift has been cutting through low-grade ore and Superintendent Griggs believes that a continuation of this work will result in the opening of a new ore deposit. The point at which prospecting is being done is near the central part of the company's ground and there has been very little development work in that locality, the nearest workings being on the 500 level. Eleven blocks of the May Day are now being worked under the leasing system, and while no sensational ore bodies are being opened, indications are unite encouraging, and but for the condition of the metal market most of the lessees would be making money. During the past week or two five cars of ore were sent out from the May Day and two more cars are now being loaded. Four out of the seven cars contained zing for which settlement will TO PRESERVE ASSETS NEW YORK, Jan. 10.—To preserve the assets of Henry Bischoff & Co., one of the oldest banking houses in the city, that firm today was placed in the hands of a receiver. The appliestion in bankraptcy was filed by an employee who has a small claim for services. Maurice Deiches was appointed receiver under \$100,000 honds.

Papers in the suit stated that other claims were pending which could not be met. No statement was made regarding assets and liabilities, but it was said that the receivership was not due to insolvency.

due to insolvency.

The partners of Henry Bischoff &
Co. are James S. Meng and William J.

Becker.

Bischoff's banking house issued a statement that it was a separate institution which had nothing whatever to do with the firm for which a receiver was appointed.

A CURE IS WHAT YOU WANT GLOOMY ---Ambition. Energe,

Weakness is the result of many dis-cases and is the cause of more sorrow and suffering than all other ailments combined. I see the victims of this dis-order on every hand, their whole appear-ance proclaiming to all the world their trouble and tending to blight their exist-ence. My treatment cures disordered men by overcoming and removing the effects of disorders. It stops all wasts and quickly restores the victim to what nature intended—a healthy and vigor-ous man, with all his functions and power complete.

CURES GUARANTEED

I AM FOR MEN.

Dr. Ehrlich's Famous Remedy **IMPROVED**

Por Blood Disorders.

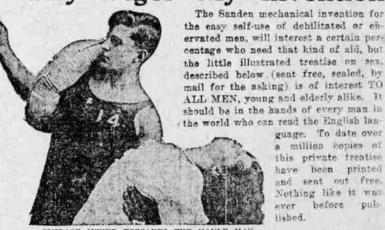

I use the newest and latest treatment for Blood Poison and Skin Diseases. Professor Ebrilch's (of Germany) "914," the improved 506, instead of the old remedy. "914" is absolutely safe and harmless and more effective than "806" and can be administered in the office publically and with absolutely no ill effects whatever or detention from business. This treatment is far superior to any other employed in the cure of these dreadful diseases. Symptoms begin to disappear in a few hours after the administration of the remedy. Even though 606 has failed or left had results, and if you have or ever had these diseases in any stage or form, do not fail to call and get this wonderful treatment.
